Curtain Call

Specialist Waste Recycling offer a nationwide waste collection and recycling service for the UK business sector providing a tailored package to each customer — a perfect partner for The LinkTip Kerbside Group's philosophy!

Their recent order of two non-tipping curtain sided vehicles, bound for service in Derbyshire, are a repeat order to add to an already impressive fleet.

The vehicle was designed, back in 2009, by our in-house design team through consultation with SWR to ensure the end product matched their unique requirements. This is a service we pride ourselves on as our bespoke vehicles show.

For further information about curtain sided vehicles or any other LinkTip Kerbside product please use the contact details below:

Fitted to an Iveco 18t chassis a GRP box-style body was created with a full offside and partial nearside panel and partial curtain side to allow large parts to be lifted on to the vehicle with the aid of a Penny Hydraulics V20 crane. To maximise the versatility of this application, a second docking station was also installed centrally to the nearside.

To the rear, a Ratcliffe Palfinger 1500kg Cantilever lift was installed by our experienced engineers to further extend the flexibility of the vehicle.

These vehicles are no's 3 & 4 in a second order placed by SWR. We are about to start work on three second-hand vehicles retrofitting similar tailifts.
